RAPPORT

QU YANLIN G4.2

1. Presentation le projet

Ce projet est la mise en œuvre d'une application base de donnees portant sur la gestion du reseau de transport TISSEO.

Assurer l'integrite de la base quand executer insert, update ou delete.

Afficher sequentiel des arrets d'un troncon de ligne.

Calculer le temps entre deux arrets d'un meme troncon.

Afficher le trajet entre deux arrets de deux troncon.

2. Principales declencheurs

- a) **AssurerIncremente**: les positions des arrets dans le troncon doivent etre incrementes 1 quand executer apres insert on tableau stop times.
- b) **AssurerArriInfeDepart**: l'heure d'arrivee a un arret doit etre inferieure a l'heure de depart de ce meme arret.
- c) **AssurerCalendar**: la date de mise en service d'un service doit etre inferieure a la date de fin de service.
- d) **AssurerCalendarDatesException**: la date d'une exception d'un service doit etre comprise entre la date de debut de mise en service et la date de fin.
- e) **AssurerParentStation**: il ne peut exister une station parent que si le type d'arret est egal a 0.

3. Principales procedures et functions dans le paquetage TravailFaire

- i. **procedure affichageTronLigne** :Afficher sequentiel des arrets d'un troncon de ligne.un parametre entree Trip id.
- ii. **function tronconsPrivee** :retourne un tableau
- iii. procedure affichageHoraire : Afficher la programmation horaire
- iv. function calculeDuTemps :calculer le temps.trois parametres entree Trip_id,Stop_id_arrive,Stop_id_depart.
- v. **procedure partirArret** :retrouve toute sa hierarchie d'arret parent.un parametre entree Stop_id.

4. Rependre le procedure partirArret

procedure partirArretHierarchique: Syntaxe d'une requete hierarchique.un parametre entree Stop id.

connect by stop_id= prior PARENT_STATION

chercher les plus haute niveaux

connect by prior stop_id= PARENT_STATION

chercher les plus base niveaux

5. Gestion des trajets d'un utilisateur

- i. **function chercherStation**: Retourner le nom de station.
- ii. **procedure chercherRoutes**: Afficher les information de la route
- iii. procedure lesTrajets: Afficher les information de troncon en croissant stop sequence

iv. procedure Gestion_Trajet :

Chercher Trip_id,stop_id et intersection_id dans deux troncon.

Afficher les trajets

Les trois autres function et procedures dans ce procedure.

6. Tester Declencheur

a) Tester declencheur AssurerIncremente.

L'echec :

```
insert into stop_times values (4503603927916039,1970324837186202,28,'07:27:00','07:28:00');
```

```
ERREUR à la ligne 1 :

ORA-20001: stop_sequence ne doit pas y avoir de saut superieur a 1

ORA-06512: à "21207804. ASSURERINCREMENTE", ligne 6

ORA-04088: erreur lors d'exécution du déclencheur '21207804. ASSURERINCREMENTE'
```

La reussite:

```
insert into stop_times values (4503603927916039,1970324837186202,27,'07:27:00','07:28:00');
```

1 ligne créée.

Supprimer la donnee:

Delete from stop_times where trip_id=4503603927916039 and stop_sequence=27

b) Tester declencheur AssurerArriInfeDepart.

L'echec:

```
insert into stop times values
```

```
(4503603927916039,1970324837186202,27,'07:27:00','07:26:00');
```

```
ERREUR à la ligne 1 :

ORA-20002: heure arrive inferieure a lheure de depart

ORA-06512: à "21207804.ASSURERARRIINFEDEPART", ligne 7

ORA-04088: erreur lors d'exécution du déclencheur '21207804.ASSURERARRIINFEDEPART'
```

La reussite:

```
insert into stop_times values (4503603927916039,1970324837186202,27,'07:27:00','07:28:00');
```

1 ligne créée.

Supprimer la donnee:

Delete from stop times where trip id=4503603927916039 and stop sequence=27

c) Tester declencheur AssurerCalendar.

L'echec :

insert into calendar values

```
(4785078899048782,0,0,0,0,0,0,0,0'03-01-2014','03-01-2013');
```

```
ERREUR à la ligne 1 :
```

ORA-20003: La date de mise en service de service doit etre inferieur a la date de fin de service ORA-06512: à "21207804.ASSURERCALENDAR", ligne 7

ORA-04088: erreur lors d'exécution du déclencheur '21207804.ASSURERCALENDAR'

La reussite:

insert into calendar values

(4785078899048782,0,0,0,0,0,0,0,0'03-01-2012','03-01-2013');

1 ligne créée.

Supprimer la donnee:

Delete from calendar where service_id=4785078899048782

Tester declencheur AssurerCalendarDatesException.

L'echec:

insert into calendar dates values(4785078899048781,'03-01-2013',1)

```
ERREUR à la ligne 1 :
```

ORA-20004: La date nest pas entre la date de debut de mise en service et la date de fin

ORA-06512: à "21207804. ASSURERCALENDARDATESEXCEPTION", ligne 8

ORA-04088: erreur lors d'exécution du déclencheur '21207804. ASSURERCALENDARDATESEXCEPTION'

insert into calendar dates values(4785078899048781,'04-01-2014',1)

1 ligne créée.

Tester declencheur AssurerParentStation.

L'echec:

insert into stops values(1970324837199999,",'test',1,1)

```
ERREUR à la ligne 1 :
```

ORA-20005: Il ne peut exister une station parent>0 que si le type darret est egal a 0

ORA-06512: à "21207804. ASSURERPARENTSTATION", ligne 5

ORA-04088: erreur lors d'exécution du déclencheur '21207804. ASSURERPARENTSTATION'

La reussite:

insert into stops values(1970324837199999,",'test',1,0)

1 ligne créée.

Supprimer la donnee:

delete from stops where stop_id=1970324837199999

7. Tester paquetage

Tester procedure affichageTronLigne:

execute TravailFaire.affichageTronLigne(4503603927916040);

```
